GENERAL ADVICE!

LED lighting draws less current than Incandescent lamps.

This is known to cause problems with certain vehicle bulb failure monitoring systems, across all manufacturers.

The low power consumption of led lamps can lead to a visual error message to the driver.

As monitoring of the direction indicator is a mandatory requirement, we recommend Aspöck LED lamps are always used in conjunction with our LED Control Gear „LCG“ Aspöck cannot accept any liability for incompatibility of the „LCG“ with the non-mandatory functions, these are provided for driver convenience. With the variation of vehicle types available it is impossible for Aspöck to verify every combination.

It is the Driver of the vehicles legal responsibility to check all lighting is operating correctly.

It must also be noted that the maximum current for each function is 3A. Please take care if connecting a vehicle to an „AC source or pulsed DC“ as this will lead to component failure.

No liability will be accepted for the use of „LCG“ with non-approved Vehicles or lamps.

Aspöck accepts no other terms and installation of our products will be deemed as full acceptance of our terms and conditions.

The LED control gear enables the connection of LED rear lamps to tractor units, even if they are equipped with electronic lamp failure detection systems and onboard computers. Additionally, all light functions are monitored so that any malfunctions that may arise are displayed on the onboard computer.

The LCG guard this difference in power and feeds the surplus power via a dedicated permanent power back into the onboard electrical system. No heat sinks are required as the system ensures that only minor power loss occurs.
